ETEC 3100 – Educational Technology for Preservice Teachers in Schools
Texas A&M University - Corpus Christi
College of Education – Special Services Department – Educational Technology

Course Syllabus – Summer, 2012

INSTRUCTOR INFORMATION

Name: Susan Elwood
E-mail: Susan.Elwood@tamucc.edu
Dates: June 4 – July 6, 2012

Phone: 825-2407
Office: Faculty Center 252;
Office Hours: Through BlackBoard email.
Skype web conferencing (DrEprof) available with BlackBoard email and confirmation.

I. DESCRIPTION

This field-based integrated course is designed to provide educators with an overview of basic resource tools and instructional methods to be considered when designing and developing educational technology integrated curriculum plans. This field-based infused seminar will look at basic integrated applications in creating electronic portfolios for all students. Aspects of online collaborative tools and their pedagogical implications in K-12 environments will also be incorporated.

Credit Hours: 1

II. RATIONALE

Integrating technology into meaningful learning experiences is of great importance to educational learning environments. More specifically, the TEKS and TExES competencies integrate technology into numerous curricular objectives. Integrating meaningful technology learning experiences into the preservice teacher site curriculum will help K-12 students, preservice teachers, teachers and college faculty incorporate a range of technology to enhance learning and teaching.

III. STATE PROFICIENCIES, TExES COMPETENCIES, & TECHNOLOGY APPLICATIONS STANDARDS FOR ALL BEGINNING EDUCATORS

Assignments

TIE option
A. Learner-Centered State Proficiencies

See Appendix A for the Texas Learner-Centered Proficiencies.

B. TExES Competencies / Pedagogical and Professional Responsibilities (PPR)

See Appendix B for the TExES Competencies addressed for the PPR exam.

C. Technology Applications Standards for All Beginning Educators

The State Board for Educator Certification (SBEC) approved educator certification standards in Technology Applications for all beginning educators. They are based on the Technology Applications TEKS for Grades 6-8. These standards are a part of the Texas Examination of Educator Standards (TExES) test frameworks in Pedagogy and Professional Responsibilities. See Appendix A for a more detailed listing of the standards or visit http://class.sprnet.org/target/sbec_standards.htm for the PDF file download.

Technology Applications, Standards I-V

| I. | All teachers use technology-related terms, concepts, data input strategies, and ethical practices to make informed decisions about current technologies and their applications. |
| II. | All teachers identify task requirements, apply search strategies, and use current technology to efficiently acquire, analyze, and evaluate a variety of electronic information. |
| III. | All teachers use task-appropriate tools to synthesize knowledge, create and modify solutions, and evaluate results in a way that supports the work of individuals and groups in problem-solving situations. |
| IV. | All teachers communicate information in different formats and for diverse audiences. |
| V. | All teachers know how to plan, organize, deliver, and evaluate instruction for all students that incorporates the effective use of current technology for teaching and integrating the Technology Applications Texas Essential Knowledge and Skills (TEKS) into the curriculum. |

IV. OBJECTIVES AND OUTCOMES

This field-based infused seminar is designed to enable you to:
• Communicate electronically and collaboratively with peers and mentor teachers to enhance curricular planning, instructional strategies and the use of technology
• Incorporate a range of technology to enhance teaching and learning
• Develop a PDAS-based electronic portfolio of your field-based education experiences while envisioning similarly tooled process or product portfolios for your students

V. INSTRUCTIONAL METHODS AND ACTIVITIES

Instructional methods and activities in this course include:
• Online experiences (discussion threads, collaborative documents, instructional delivery, experiential / exploratory discovery, mentoring, service and project-based learning)
• Face to face experiences (lecture/discussion, demonstrations, student presentations, mentoring)

VI. ASSIGNMENTS & DUE DATES

*Note: Due dates are listed as ultimate deadlines and are generalized in this syllabus. See your Site Professor or BlackBoard information page corresponding to your preservice teacher site for more concrete deadlines. Submission of assignments will be through your EduBlog with links to any online creations.

A. Course Blog Portfolio – Using Edublogs.org, an electronic portfolio of your course experiences will be developed. Your workshop reflective experience and developmental TIE active student participation experiences will be introduced and reflected upon.
Due: Completed Blog due the second to last class day; see below for intermediate deadlines

B. Technology Integrated Experience (TIE) Preparatory Activities –

• (Due 1st day of class) -You will be asked to complete an introductory slide as your part to a combined student roster for this course.
• (Due Wednesday of week 2) - You will also be asked to sign up for and spend a little time exploring a few tools to be used in the Technology Workshop that is scheduled for the first 1/3 of the course. These brief activities will be communicated as part of the “pre-workshop” activities within the workshop link off the BlackBoard home page.

C. Technology Integrated Experience (TIE) Active Student Participation –Completion of this assignment will include the planning and implementation of the technologies reviewed at the Tech Workshop into one of your preservice teacher site lesson plans. Include your plan and introductory student files in your first reflective blog post regarding this TIE Active Participation lesson in which students will actively use technology (higher-level VoiceThread reflections, Google Document collaborative synthesis, etc). Your second blog entry regarding this lesson will include completed student artifacts linked within the blog entry as well as a personal reflection as to what worked well, lessons learned, and Higher-Order Thinking challenge question(s) for peers reviewing your blog.

Items Due:
1st Blog post: Reflections upon what you are considering for a TIE activity, as stipulated in the workshop link. Attach any preliminary, developmental TIE plans. Attendance to open lab sessions HIGHLY suggested at this time. Come with only TEKs for the lesson, if needed. Include HOTS question(s) in your blog reflection for peer interaction. Interact with at least three others’ blog posts.

Date Due: 2 days after the workshop deadline to your blog

2nd Blog post: Lesson plan with resource links in plan and preliminary student files attached to or linked within the plan. Make sure you include links to your preliminary files that will be ready for lesson implementation as you walk into your class. Include HOTS question(s) for peer reflective blog interaction. Interact with at least three others’ blog posts.

Date Due: 2 days prior to lesson implementation; BB email notification to Dr. Elwood to check your blog for your pre-lesson post

3rd Blog post: Completed student sample files with reflective entry regarding the experience. Include a “best promotion” picture or short video of you in action during the lesson (with backs of students’ heads) and HOTS question(s) for peer interaction. Make sure you attach and/or hyperlink to students’ finished products. Your reflective blog post needs to include a) what worked well in terms of TIE strategies for implementation, and b) lessons learned / improvements / additional strategies after your experience. Interact with at least three others’ blog posts. This reflective process is worth gold!!

Date Due: 2 days after your lesson; BB email notification to Dr. Elwood to check your post-lesson blog post

Communication Guidelines

The BlackBoard Mail tool is recommended for most private communication within the course. When contacting your instructor or your co-learners in the course, always use the BlackBoard Mail tool for course related communications rather than another personal e-mail account (e.g., Yahoo or Google email). This will allow the instructor and your co-learners to access assignments, questions, and course material more efficiently.
VII. EVALUATION / GRADING

VIII. ASSIGNMENTS & POLICIES

Note:

*TIE = Technology Integrated Experience: the EC-6 student activity you will incorporate into one of your field-basing site lesson plans. For you, this also means the associated planning process and careful consideration of the documents supporting that process.

*Plan ahead; avoid procrastination. If you need to communicate with people, do so early on, rather than waiting and discovering your CT is out sick, etc. Use various forms of communication (face to face, email, texting quick messages, etc) to achieve your communication need. Ask for and adapt to their preferred style of communication and follow up with a secondary form of communication. You may use me as an excuse as to why you’re using two forms of communication!

*Mentoring / collaboration: As part of policy and your course grade, you will be expected to collaborate and peer mentor within the BlackBoard environment. Various levels of technology experience exist within each course. Providing quality feedback and assistance to peers within the BlackBoard discussion threads will be recorded and evaluated based upon quality of information posted, as well as persistence throughout the course of TIE and ePort development.
Late work: Assignments submitted within one week past the due date will be accepted for a maximum of 75% credit; one week or more past the due date for a maximum of 50% credit. Quizzes are available only on the date provided to your field-basing section.

IX. TEXTBOOK

- No textbook needed for this course. A subscription to EduBlogs may be needed for under $5.00 per month.

Appendix A

*TENAS TEACHER PROFICIENCIES*

Adopted by the State Board of Education in February 1994. These proficiencies guide preservice preparation, professional development, and teacher appraisal practices for teachers in Texas.

LEARNER-CENTERED KNOWLEDGE

The teacher possesses and draws on a rich knowledge base of content, pedagogy and technology to provide relevant and meaningful learning experiences for all students.

The teacher exhibits a strong working knowledge of subject material and enables students to better understand patterns of thinking specific to a discipline. The teacher stays abreast of current knowledge and practice within the content areas, related disciplines and technology; participates in professional developmental activities; and collaborates with other professionals. Moreover, the teacher contributes to the knowledge base and understands the pedagogy of the discipline.

As the teacher guides learners to construct knowledge through experiences, they learn about relationships among and within the central themes of various disciplines while also learning how to learn. Recognizing the dynamic nature of knowledge, the teacher selects and organizes topics so students make clear connections between what is taught in the classroom and what they experience outside the classroom. As students probe these relationships, the teacher encourages discussion in which both the teacher’s and the students’ opinions are valued. To further develop multiple perspectives, the teacher integrates other disciplines, learners’ interests, and technological resources so that learners consider the central themes of the subject matter from as many different cultural and intellectual viewpoints as possible.

(Return to Section III)

LEARNER CENTERED INSTRUCTION

To create a learner-centered community, the teacher collaboratively identifies needs and plans, implements, and assesses instruction using technology and other resources.

The teacher is a leader of a learner-centered community, in which an atmosphere of trust and openness produces a stimulating exchange of ideas and mutual respect. The teacher is a critical thinker and problem solver who plays a variety of roles when teaching. As a coach, the teacher observes, evaluates, and changes directions and strategies whenever necessary. As a facilitator, the teacher helps students link ideas in the content area to familiar ideas, to prior experiences, and to relevant problems. As a manager, the teacher effectively manages the learning environment so that optimal learning occurs.

Assessment is used to guide the learner community. By using assessment as an integral part of instruction, the teacher responds to the needs of all learners. In addition, the
teacher guides learners to develop personally meaningful forms of self-assessment.

The teacher selects materials, technology, activities, and space that are developmentally appropriate and designed to engage interest in learning. As a result, learners work independently and cooperatively in a positive and stimulating learning climate fueled by self-discipline and motivation.

Although the teacher has a vision for the destination of learning, students set individual goals and plan how to reach the destination. As a result, they take responsibility for their own learning, develop a sense of the importance of learning for understanding, and begin to understand themselves as learners. The teachers’ plans integrate learning experiences and various forms of assessment that take into consideration the unique characteristics of the learner community. The teacher shares responsibility for the result of this process with all members of the learning community.

Together, learners and teachers take risks in trying out innovative ideas for learning. To facilitate learning, the teacher encourages various types of learners to shape their own learning through active engagement, manipulation, and examination of ideas and materials. Critical thinking, creativity, and problem solving spark further learning. Consequently, there is an appreciation of learning as a life-long process that builds a greater understanding of the world and a feeling of responsibility toward it.

**LEARNER CENTERED COMMUNICATION**

While acting as an advocate for all students and the school, the teacher demonstrates effective professional and interpersonal communication skills.

As a leader, the teacher communicates the mission of the school with learners, professionals, families, and community members. With colleagues, the teacher works to create an environment in which taking risks, sharing new ideas, and innovative problem solving are supported and encouraged. With citizens, the teacher works to establish strong and positive ties between the school and the community.

Because the teacher is a compelling communicator, students begin to appreciate the importance of expressing their views clearly. The teacher uses verbal, nonverbal, and media techniques so that students explore ideas collaboratively, pose questions, and support one another in their learning. The teacher and students listen, speak, read, and write in a variety of contexts; give multimedia and artistic presentation; and use technology as a resource for building communication skills. The teacher incorporates techniques of inquiry that enable students to use different levels of thinking.

The teacher also communicates effectively as an advocate for each learner. The teacher is sensitive to concerns that affect learners and takes advantage of community strengths and resources for learners’ welfare.

(Return to Section III)
Appendix B

**PPR for Grades K-12**

**Competency 009**
The teacher incorporates the effective use of technology to plan, organize, deliver, and evaluate instruction for all students.

The beginning teacher:

A. Demonstrates knowledge of basic terms and concepts of current technology (e.g., hardware, software applications and functions, input/output devices, networks).

B. Understands issues related to the appropriate use of technology in society and follows guidelines for the legal and ethical use of technology and digital information (e.g., privacy guidelines, copyright laws, acceptable use policies).

C. Applies procedures for acquiring, analyzing, and evaluating electronic information (e.g., locating information on networks, accessing and manipulating information from secondary storage and remote devices, using online help and other documentation, evaluating electronic information for accuracy and validity).

D. Knows how to use task-appropriate tools and procedures to synthesize knowledge, create and modify solutions, and evaluate results to support the work of individuals and groups in problem-solving situations and project-based learning activities (e.g., planning, creating, and editing word processing documents, spreadsheet documents, and databases; using graphic tools; participating in electronic communities as learner, initiator, and contributor; sharing information through online communication).

E. Knows how to use productivity tools to communicate information in various formats (e.g., slide show, multimedia presentation, newsletter) and applies procedures for publishing information in various ways (e.g., printed copy, monitor display, Internet document, video).

F. Knows how to incorporate the effective use of current technology; use technology applications in problem-solving and decision-making situations; implement activities that emphasize collaboration and teamwork; and use developmentally appropriate instructional practices, activities, and materials to integrate the Technology Applications TEKS into the curriculum.

G. Knows how to evaluate students' technologically produced products and projects using established criteria related to design, content delivery, audience, and relevance to assignment.

H. Identifies and addresses equity issues related to the use of technology.
