Texas A&M University – Corpus Christi  
Department of Mathematics and Statistics  
MATH 2413.002: Calculus 1  
Summer 2012 (6/4-7/24)

I. COURSE INFORMATION

Instructor: Dr. Jeff Lyons
Office: CI 357
Office Phone: (361) 825-3265
Email: Jeff.Lyons@tamucc.edu
Website: http://math.tamucc.edu/~jlyons
Office Hours: TR 12:00-2:00 PM and by appointment
Time & Location: TR 2:00-3:55 PM in CS 108
Final Exam: Tuesday, July 24 from 2:00-3:55 PM in CS 108

II. COURSE DESCRIPTION

The main concepts covered in this class are **limits** of functions, **continuity** of a function, the **derivative** of a function, and an introduction to the **integral** of a function.

III. COURSE PREREQUISITES

MATH 1314: College Algebra and MATH 1316: Trigonometry OR MATH 2312: Pre-Calculus OR placement beyond MATH 2312: Pre-Calculus.

IV. COURSE MATERIALS

**Required:**
- Access code for the online system WebAssign (available for purchase in the bookstore or online).
- Graphing calculator – TI 84 is recommended.
- Printed materials found at http://math.tamucc.edu/~jlyons (check often for updates and changes)

**Recommended:**
- Physical copy of *Calculus: Early Transcendentals* by James Stewart 7ed. However, an electronic copy comes with your WebAssign access.

V. STUDENT LEARNING OUTCOMES

At the end of the course the student should:

1. Understand and use the concept of the limit of a function.
   a. Use properties of limits and other techniques, like L'Hopital’s rule, to determine the existence or not of the limit of a function at a given value;
   b. Understand the definition of continuity of functions
      i. From a function given a graph determine the discontinuity point indicating which properties of continuity fail, and
      ii. From a given piece-wise function defined by formulas determine the points at which the function is discontinuous.

2. Be able to provide examples and counterexamples dealing with important results discussed in this course,
and especially to understand the necessity of the conditions for some of them:

a. Give an example of a function which does not satisfy the Intermediate Value Theorem (IVT),

b. Give an example of a function which does not satisfy the Mean Value Theorem (MVT),

c. Give an example of a discontinuous function with a removable/non-removable discontinuity,

d. Give an example of a function whose limit does not exist at a point,

e. Give an example of a function that is continuous but not differentiable at a point.

3. Understand and interpret the concept of the derivative:

a. Graphically, as the slope of the tangent line at a point,

b. Analytically, as the instantaneous rate of change of the function,

c. Use information about the first and second derivative to obtain information about the original function, interpret the units of the derivative,

d. Points where the function is increasing the fastest, where it is constant, etc.,

e. From a given graph determine all the critical points and indicate at which the function is not differentiable,

f. From a function defined piecewise determine whether or not the function is differentiable at the point(s) where the pieces join.

4. Find the linear approximation of a function at a differentiable point and use it to estimate the function.

a. Produce the linear approximation from a graph and determine if in a neighborhood of the point it will give an overestimate or underestimate,

b. From a function defined by an algebraic expression find the linear approximation at a given point and use it to estimate the original function and justify whether it is an overestimate or underestimate.

5. Sketch the graph of a function or its derivative function:

a. From the graph of a function, produce the graphs of the first and second derivative functions,

b. From the graph or information about the first and second derivative of a function, generate the graph of the function,

c. From a function defined by a formula find the information to sketch its graph (domain, continuity points, increasing/decreasing intervals, concave up/down, end behavior, asymptotes).

6. Use calculus techniques to find the solution of problems:

a. Given an optimization problem find the mathematical model for it, and solve it using calculus techniques,

b. Related rates problems.

7. Use implicit differentiation:

a. Calculate derivatives using implicit differentiation,

b. Determine the equation of tangent lines to graphs obtained from expressions where one variable is given implicitly as the function of the other.

8. Understand the concept of the integral:

a. Interpret the units of the integral in the solution of problems,

b. Evaluate basic definite integrals,

c. Calculate the area of regions by using integration,

d. Interpret integrals as area to evaluate them,

e. Estimate integrals using Riemann Sums,

f. Use the Fundamental Theorem of Calculus to understand the relationship between integration and differentiation.

VI. INSTRUCTIONAL METHODS AND ACTIVITIES

Methods and activities for instruction include: Lectures, calculator demonstrations and group activities. Students will complete practice materials online and do and submit homework online. Help will be available from the instructor during office hours and through email. Tutoring is also available on campus in CASA.
VII. EVALUATION AND GRADE ASSIGNMENT

The methods of evaluation and the criteria for grade assignments are:

- **Homework**: 15%
- **Quizzes**: 10%
- ** Labs**: 20%
- **Derivative Mastery**: 10%
- **Exams**: 30%
- **Final Exam**: 15%

Grading Scale – grades will be no stricter than:

- **A** = 90 – 100
- **B** = 80 – 89.99
- **C** = 70 – 70.99
- **D** = 60 – 69.99
- **F** = 59.99 or below

**Homework**: Individual assignments are made online through WebAssign. Students will solve and submit completed homework assignments online through WebAssign. Homework will be assigned at the completion of each section and each homework assignment will have a due date. Homework assignments will have extension feature which will allow you to work for an extra period of time beyond the due date but for a penalty. WebAssign will not allow students to submit homework assignments after the extension date has passed. WebAssign can be temporarily unavailable or behave erratically from time to time – no time extensions will be given for these problems. Therefore, it is in your best interest to finish the assignment well before the due date. Time extensions for homework will not be given for any circumstances, happenings, or individual student situations, period. Here is a PowerPoint link with step by step instructions for enrollment: [http://www.webassign.net/user_support/student/FDOC_self_enrollment.ppt](http://www.webassign.net/user_support/student/FDOC_self_enrollment.ppt). It is also advisable to work extra problems out of the textbook’s exercise section for more practice, and it is the discretion of the professor to assign extra homework at any time. This includes any in class activities. Homework is worth 15% of the course grade and a few of the lowest grades will be dropped.

**Quizzes**: Quizzes will be administered online through WebAssign and in class. Timed online quizzes will open each week and will have a due date several days later. Once you begin an online quiz, you will not be able to stop and return. Quizzes are worth 10% of the course grade, and a few of the lowest quiz grades will be dropped.

**Labs**: Labs will consist of recitations and a technology based investigation of calculus. Lab reports will be graded on correctness, conclusions and presentation. The Lab TA will communicate your grades. The lab grade is 20% of the course grade. Labs can be found on the course website. For more information, please refer to the lab syllabus provided by your TA.

**Derivative Mastery**: Students are expected to master the skill of computing derivatives of elementary functions. The student will demonstrate this on the Derivative Mastery Exam. The student will have three chances to pass the exam. Passing the exam constitutes receiving full credit on 7 of 10 problems graded “all or nothing.” Calculators or other materials will NOT be allowed on the exam. The Derivative Mastery is worth 10% of the course grade.

**Exams**: There will be three equally weighted individual assessment exams given during the course of the semester. Calculators will be allowed unless otherwise instructed. A tentative schedule of exam dates can be found on the course website. The combined exams will be worth 30% of the course grade.

**Final Exam**: The final exam will be an individual assessment covering **ALL** material presented in the course. Graphing calculators are allowed and encouraged for the final exam. The final is worth 15% of the course grade. The lowest test grade may be replaced by the final if it increases your score.

No special options, assignments, or alternative grading schemes will be considered for individual students. All graded materials returned to the student are the sole responsibility of the student and must be resubmitted to
the professor to receive consideration in grading disputes. This should be done within one week of receiving the returned material. *The sharing of calculators and other materials during quizzes and exams is not permitted.*

VIII. TENTATIVE COURSE SCHEDULE

A tentative course schedule may be found at [http://math.tamucc.edu/~jlyons/ss1/2012/math2413](http://math.tamucc.edu/~jlyons/ss1/2012/math2413).

IX. CLASS POLICIES AND EXPECTATIONS

**Attendance:** Attendance is mandatory. Absences in the class may impact your final grade. Please save absences for emergencies. Any adjustments or corrections to the schedule or other policies will be announced in class, and it is the responsibility of the student to stay informed of such changes. *It is wise to develop acquaintances you can depend upon in case of an absence.*

**Make-ups:** Since attendance is expected, there will be no make-up of online homework due to absence – excused or unexcused – no exceptions. There will be no make-up given for missed quizzes or exams since several quiz grades will be dropped and an exam grade may be replaced or dropped by the student attending tutoring. If the student has a legitimate conflict, for example, an athletic event, it will be possible to schedule to take a quiz/exam in advance of the quiz/exam date. This should be handled as soon as possible to allow the professor adequate time to prepare an alternate quiz/exam. Students absent from the final exam must either qualify for an incomplete [for the course] or receive a grade of zero for the exam; the final exam cannot be rescheduled or made-up.

**Email:** I will send information, updates, etc. through email to your islander (or campus registered) email account. It is your responsibility to check the account often for important and pertinent information. I will also reply to email as best I can. Remember I have multiple classes (and a life) so a response may be slow at times!

Late arrivals and early departures not only disturb your professor but your fellow students. Please refrain from moving about and talking during class. If you disrupt the class for any reason, I may require you to leave the classroom.

Students will not be allowed to use cell phones or MP3 devices during class. If a student is caught using either during a quiz or exam, it will be considered as cheating and may warrant an “F” for the assignment.

Read lessons before and after each class. Take detailed notes from the book and class lectures.

Ask questions in class. Feel free to interrupt the lecture or discussion at any time for relevant questions. They are very much encouraged and will benefit everyone in the class. Come into my office during office hours for as much help as you need. You can also schedule a time in advance with me outside office hours for extra help if needed. Please email me with any questions you might have, and I will do my best to respond quickly.

X. DROPPING A CLASS

I hope that you never find it necessary to drop this or any other class. However, events can sometimes occur that make dropping a course necessary or wise. Please consult with me before you decide to drop to be sure it is the best thing to do. Should dropping the course be the best course of action, you must initiate the process to drop the course by going to the Student Services Center and filling out a course drop form. Just stopping attendance and participation WILL NOT automatically result in your being dropped from the class. June 22nd is the last day to drop a class with an automatic grade of "W" this term.

XI. ACADEMIC INTEGRITY/PLAGIARISM

University students are expected to conduct themselves in accordance with the highest standards of academic honesty. Academic misconduct for which a student is subject to penalty includes all forms of cheating, such as
illicit possession of examinations or examination materials, falsification, forgery, complicity or plagiarism. (Plagiarism is the presentation of the work of another as one’s own work.) In this class, academic misconduct or complicity in an act of academic misconduct on an assignment or test will rest in an F on the assignment or test.

XII. CLASSROOM/PROFESSIONAL BEHAVIOR

Texas A&M University – Corpus Christi, as an academic community, requires that each individual respect the needs of others to study and learn in a peaceful atmosphere. Under Article III of the Student Code of Conduct, classroom behavior that interferes with either (a) the instructor’s ability to conduct the class or (b) the ability of other students to profit from the instructional program may be considered a breach of the peace and is subject to disciplinary sanction outlined in Article VII of the Student Code of Conduct. Students engaging in unacceptable behavior may be instructed to leave the classroom. The prohibition applies to all instructional forums, including classrooms, electronic classrooms, labs, discussion groups, field trips, etc.

XIII. DISABILITY SERVICES

The Americans with Disabilities Act (ADA) is a federal anti-discrimination statute that provides comprehensive civil rights protection for persons with disabilities. Among other things, this legislation requires that all students with disabilities be guaranteed a learning environment that provides reasonable accommodation of their disabilities. If you believe you have a disability requiring an accommodation, please contact the Disability Services Office at (361) 825-5816 or go to the office at Driftwood 101.

XIV. GRADE APPEALS PROCESS

As stated in University Rule 13.02.99.C2, Student Grade Appeals, a student who believes that he or she has not been held to appropriate academic standards as outlined in the class syllabus, equitable evaluation procedures, or appropriate grading, may appeal the final grade given in the course. The burden of proof is upon the student to demonstrate the appropriateness of the appeal. A student with a complaint about a grade is encouraged to first discuss the matter with the instructor. For complete details, including the responsibilities of the parties involved in the process and the number of days allowed for completing the steps in the process, see University Rule 13.02.99.C2, Student Grade Appeals, and University Procedure 13.02.99.C2.01, Student Grade Appeal Procedures. These documents are accessible through the University Rules Web site at http://www.tamucc.edu/provost/university_rules/index.html. For assistance and/or guidance in the grade appeal process, students may contact the Office of Student Affairs.

XV. SYLLABUS AMENDMENTS

The instructor may amend the syllabus at any time prior to the final exam by announcing the changes in class.
